

# *The European Open Science Cloud*

- Towards an internet of FAIR Data and Services: how to break it down on a domestic level \_

# EOSC-The European effort

“Europe's final transition must be one from fragmented data sets to an integrated European Open Science Cloud. By 2020, we want all European researchers to be able to deposit, access and analyse European scientific data through a European Open Science Cloud...”

# Financing of the EOSC

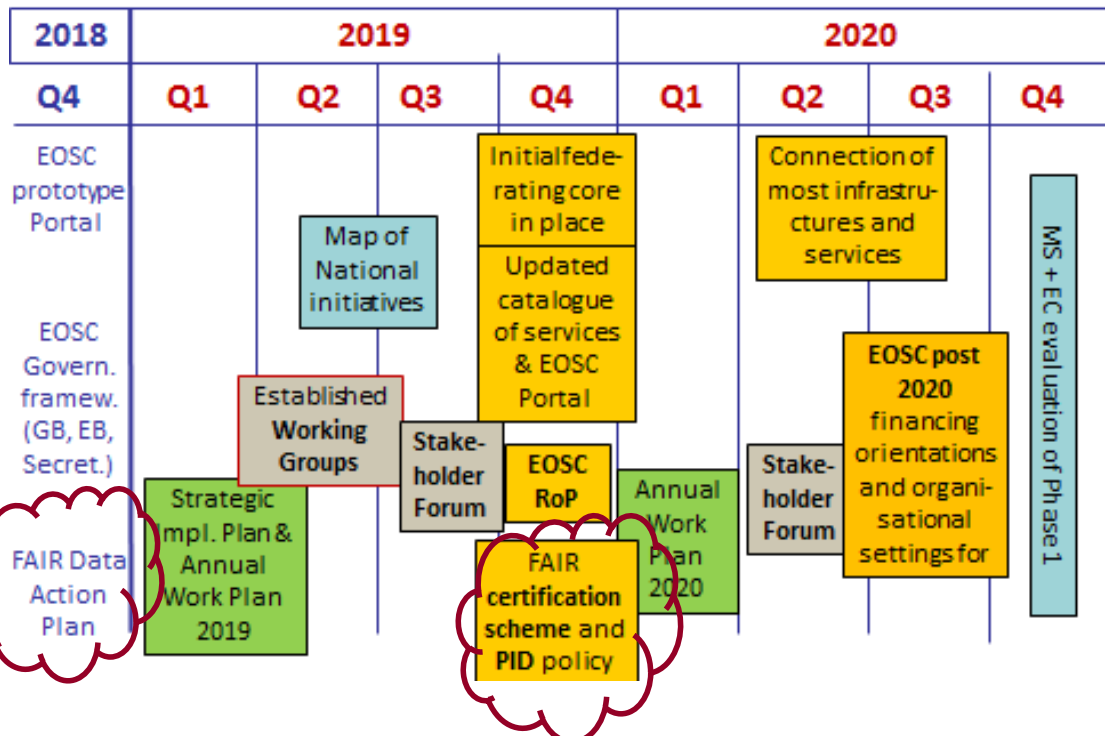

## Phase 1, until 2020:

- the Commission will invest EUR 300 million to support the core functions of the EOSC as per milestones
- Member States would flag the national initiatives that they want to federate into the EOSC (e.g. the work of the Helmholtz Data Alliance); and the resources they are willing to provide in kind
- *Research funders would start making costs eligible for FAIR data only*

## Phase 2, after 2020:

- To explore a mix of funding including possibly deposit fees from national funders (P, Pub, PPP, ...)
- Based on a full cost estimate for the running of the EOSC, conducted by the EOSC governance framework in Phase 1

**Towards a timeline for the governance framework**

# The EOSC Governance Board

- will deliberate on the orientations of the actions funded across Horizon 2020 in support of the implementation of the EOSC and inform the strategic configuration's exchange of views, notably in the context of possible work programme updates to support the overall governance.
- can *exchange views, form opinions and provide recommendations* on:

- (a) the **design of the post-2020 governance structure** (recommendations on strategic and financing orientations and organisational settings for the future of the EOSC);
- (b) measures to **fostering synergies between the EOSC activities** funded at national, regional or transnational levels;
- (c) the **mobilisation of national co-funding** for EOSC and related activities;
- (d) **orientations for the work of the EOSC Executive Board** and its technical secretariat.

- will review the **EOSC strategic implementation and annual work plans**, and **related documents** (e.g. rules for participation to guide service provision and an action plan for scientific data interoperability to operationalise the FAIR principles), which the European Commission will submit to the EOSC GB building on the EOSC Executive Board's work.
- will function until the end of 2020.

## Decision on setting up the first five Working Groups

- ***Business model, governance structure post 2020, legal entity - Sustainability,***
- ***Mapping national initiatives - Landscape,***
- ***FAIR implementation - FAIR (requirements )***
- ***Federated infrastructure and portal evolution – Architecture,***
- ***Rules of participation.***

**Thank you for your attention!**
